

NIAGARA Project Partners Advance Water Quality Research at Prague Meeting

Prague, Czech Republic (November 23, 2024) – Key partners of the NIAGARA project convened in Prague on November 21st and 22nd, 2024, to discuss the latest advancements in water quality research and development. The meeting was a success, with participants expressing satisfaction with the progress made and the collaborative atmosphere.

During the two-day event, participants engaged in a variety of activities, including:

- **Stakeholder Mapping Workshop:** A productive workshop focused on identifying and prioritizing key stakeholders, leading to valuable insights and adjustments to the project's approach.
- **Technical Presentations:** Researchers presented the latest findings on advanced analytical techniques, novel treatment processes, real-time monitoring systems, and risk assessment methodologies.
- **Site Visit:** A tour of the historic sewage treatment plant in Bubeneč provided a unique opportunity to learn about traditional and modern wastewater treatment practices.

The meeting was a great opportunity to connect with colleagues from across Europe and discuss the latest developments in water quality research. The collaborative spirit and open exchange of ideas will undoubtedly drive the project forward.

The NIAGARA project is committed to delivering innovative solutions to address the challenges of water pollution and protect public health. By fostering strong partnerships and leveraging cutting-edge research, the project aims to make a significant impact on water quality management.

About NIAGARA

The NIAGARA project brings together a consortium of leading research institutions, universities, and industry partners to address the challenges of water pollution. By combining scientific expertise and technological innovation, the project aims to deliver significant advancements in water quality management and protection.
